

Vitaliy Sviridyuk

Rochester, NY | vitaliksviridyuk@gmail.com | (585) 478-3430 | Portfolio: veathen.github.io/Portfolio | LinkedIn: linkedin.com/in/vitaliy-sviridyuk

SUMMARY

Software Engineering graduate from Rochester Institute of Technology, with professional experience in full-stack development, DevOps tooling, CI/CD pipelines, cloud infrastructure, and embedded systems. Completed software engineering roles at Paychex and Odoo, contributing to internal platforms, deployment workflows, secret-rotation automation, large-codebase refactoring, and full-stack web applications.

SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++, C#, SQL, Kotlin, Go

Backend: FastAPI, Flask, REST APIs, Maven, Tomcat, .NET

Databases / Tools: PostgreSQL, DynamoDB, Git, OOP, design patterns, testing

Frontend: React, Angular, Next.js, HTML/CSS, Figma, accessibility-focused UI design

Cloud / DevOps: AWS, AWS Bedrock, S3, DynamoDB, EKS, Docker, Terraform, Jenkins, CI/CD, Artifactory, Digital.ai Deploy

Embedded: STM32, C, BLE, USB HID, microcontroller programming, memory management

EDUCATION

Rochester Institute of Technology - Bachelor of Science in Software Engineering

May 2026

Rochester, NY

- Graduated summa cum laude; GPA: 3.83; Dean's List: Fall 2021 - Spring 2026
- Relevant Coursework: Algorithms, Distributed Systems, Secure Software, Software Testing, Software Subsystems, Web Engineering, Software Process and Project Management, Linear Algebra, AI, Discrete Math

EXPERIENCE

Paychex - Software Engineer Co-op

Aug 2024 - Aug 2025

Rochester, NY / Remote

- Built and maintained software delivery tooling for a high-velocity DevOps team supporting production pipelines and internal platform development.
- Developed components of an automated secret-rotation platform and CI/CD pipeline intended for company-wide use.
- Improved release, deployment, and secret-management workflows by resolving production-facing pipeline and automation tickets.
- Implemented changes across Python, Java, Kotlin, React, and Go while working with Jenkins, Grafana, Artifactory, and Digital.ai Deploy.

Odoo - Full Stack Engineer Intern

Jun 2023 - Aug 2023

Buffalo, NY

- Refactored, upgraded, and redesigned an internal Odoo ERP recreation app used by company employees.
- Collaborated on a two-person team to modernize legacy functionality and align the application with current codebase standards.
- Built and debugged full-stack features using PostgreSQL, psycopg2, REST APIs, and OWL, Odoo's JavaScript framework.
- Improved usability, accessibility, and maintainability across redesigned application workflows.

Wegmans Food Markets - Warehouse Product Selector

May 2022 - Aug 2022

Rochester, NY

- Worked in a fast-paced distribution environment requiring accuracy, consistency, and reliable execution under time constraints.

PROJECTS

AI Legacy Code Converter - SE Senior Project, Lockheed Martin-sponsored

Fall 2025 - Spring 2026

- Developed a full-stack AI-powered legacy code-conversion platform with generation, self-testing, Docker sandboxing, and reusable template functionality.
- Built in a six-person team using AWS Bedrock, Python, FastAPI, S3, DynamoDB, EKS, React, Next.js, and Terraform.

BLE Proximity Unlock - SE Design Seminar

Fall 2025

- Developed C software for an STM32 microcontroller to lock and unlock connected devices over USB using normalized BLE RSSI proximity detection.
- Implemented user calibration logic, BLE service interaction, HID device behavior, and proximity-based decision workflows.

Envirogram - Human-Centered Requirements and Design

Fall 2023

- Prototyped an environmental social media web app in a five-person team using Proto.io and Figma.
- Documented requirements, user feedback, accessibility considerations, and design iterations.

MIDI Song Player - Software Design for Computing Systems

Spring 2023

- Built STM32 C firmware to play stored MIDI songs through hardware controls.
- Reinforced memory management and standard implementation in an embedded environment.

Library Management System - Web Engineering

Fall 2022

- Utilized PostgreSQL, Python & psycopg2 and leveraged REST API's to create a library management system API capable of serving dozens of libraries in a well organized schema.

E-Store Application - Into to Software Engineering

Spring 2022

- Employed Java, Angular & Rest API Tomcat server, developed a fullstack online e-store application in a challenging team environment.
- Collaborated with a team of 4, developing a strong skill in conflict resolution.
